PROFILE

Level 300 BSc Computer Science student at Ghana Communication Technology University, with a cumulative GPA of 3.64. Build machine-learning pipelines, Python APIs and full-stack applications. Projects include a neural network implemented in NumPy, a fraud-detection model and a live Ghana-focused opportunity platform. Interested in software and machine-learning internships.

TECHNICAL SKILLS

Languages: Python, SQL, C++, JavaScript, PHP, HTML, CSS.

Machine learning: Neural networks, backpropagation, gradient descent, regression, classification, SMOTE, ROC-AUC, precision, recall and F1.

Libraries & data: NumPy, pandas, scikit-learn, Matplotlib, Power BI, Excel.

Engineering: FastAPI, REST APIs, Next.js, React, PostgreSQL, MySQL, Supabase, Vercel, Git/GitHub. Docker: currently learning.

SELECTED PROJECTS

ZagJobSearch, now jobs.ac.ghana

Next.js / React | FastAPI | Supabase / PostgreSQL | Vercel

- Built a live Ghana-focused platform for jobs, internships, remote roles explicitly open to Ghana-based applicants, and eligible scholarships/research funding.
- Implemented accounts and a private application tracker with statuses, notes and follow-up dates. Apply redirects to the original source after sign-in.
- Improved deadline checks, source retry queues, account security, cookie preferences and search discovery. Live: zagjobsearch.vercel.app.

github.com/blesszaglago-cmd/zagjobsearch

Credit Card Fraud Detection

Python | scikit-learn | SMOTE | FastAPI

- Built a classification pipeline on 284,807 transactions with 0.172% fraud. Applied SMOTE to training data only and retained the test-set class distribution.
- Random Forest achieved 98.26% ROC-AUC on 56,962 test transactions, identifying 82 of 98 frauds with 40 false positives. Added a local FastAPI prediction service.

BLESS MAWUMENYO ZAGLAGO

Projects, education and credentials

Neural Network from Scratch

Python | NumPy | Iris dataset

- Implemented a 4-8-3 feedforward network with ReLU, Softmax, cross-entropy loss, backpropagation and gradient descent.
- Reached 100% accuracy on the project's Iris test split, with training loss falling to 0.06 over 1,000 epochs.

Student Grade Predictor

Python | pandas | scikit-learn | Linear regression

- Built a pipeline from generated study data to training, evaluation, prediction and coefficient visualisation.
- Predicted final grades from study hours, attendance and previous scores. Reported MAE 3.99 and R^2 0.84 on the project test split.

github.com/blesszaglago-cmd/student-grade-predictor

SmartEvents | Team Lead, group of four

HTML | CSS | JavaScript | PHP | MySQL | GCTU team project

- Led a four-person team on an event-management and ticketing project covering registration, tiered tickets, QR check-in and reporting workflows.
- Contributed to SRS requirements, UML, ER/database modelling and web development with a PHP/MySQL backend.

EDUCATION

BSc Computer Science | Ghana Communication Technology University
Level 300 | Expected graduation: 2028
Cumulative GPA: 3.64 | First-year GPA: 3.68

A-grade coursework: Linear Algebra, Probability & Statistics, Calculus, Physics for Computing Systems, Logic in Computer Science, Discrete Mathematics.

WASSCE, General Science | Anlo Senior High School | 2024

CERTIFICATIONS & COURSE CREDENTIALS | 2026

- Oracle Cloud Infrastructure AI Foundations Associate | Oracle | September 2026
- Oracle Certified Foundations Associate, Agentic AI | Oracle | August 2026
- Introduction to Modern AI | Cisco | September 2026
- Data Science Essentials with Python | Cisco | September 2026
- SQL and Relational Databases 101 | IBM | September 2026
- AWS for Beginners | Simplilearn | September 2026
